

FOOTBALL QUERY REPORT

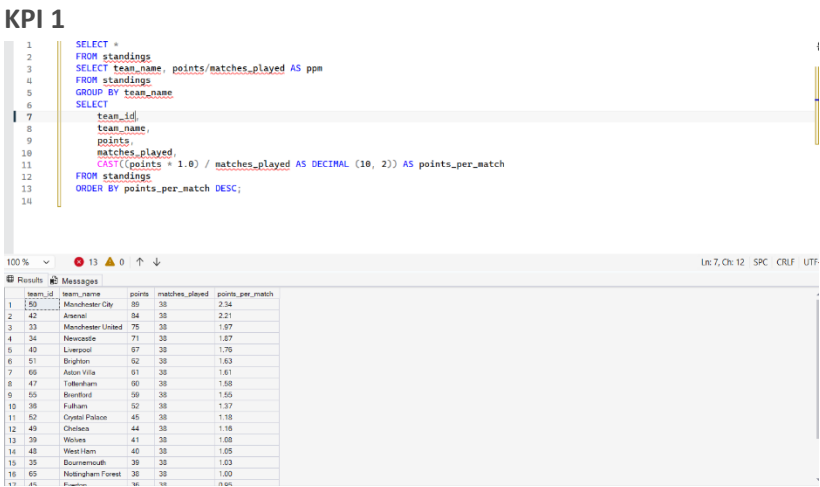

Team Efficiency & Performance Analysis

Problem Statement

League tables provide basic statistics such as points and wins but deeper insights into team performance require further analysis. This report analyses team efficiency and performance by calculating key metrics and visualising patterns in attacking strength, defensive capability, and home versus away performance. The reason for doing this is also because it was the season Arsenal- my team, started challenging for the league title (2022/23) and wanted to see deeper insights to how well each team did in certain areas.

Key Performance Indicators

POINTS PER MATCH

Manchester City won the league with 2.4 points per match, almost double the league average of 1.3. Mid-table clubs clustered tightly between 1.0–1.4 PPM

League Avg 1.3 PPM

41	Everton	8	38	21.05

A win rate above 55% strongly correlates with a top 4 finish across the seasons analysed. Those that are in the relegation zone rarely exceeded 25% Win rate alone doesn't tell the full story many mid table teams maintain their position with high draw rates effectively converting points that could have been losses highlighting defensive stability even if the team doesn't have prolific attackers.

17	41	Everton	37	38	0.97

Attacking output clusters around 1.3-1.6 goals per match for most of the division, with elite teams exceeding 2.0. The data shows a strong positive correlation between goals scored per match and final points total, confirming that attacking investment drives league success. Teams below 1.0 goals per match struggle to avoid the relegation zone regardless of their defensive record, underscoring that you cannot simply defend your way to safety.

48	West Ham	3	19	15.79
19	Wolves	3	19	15.79

Away win rate is the sharpest differentiator between top-four and mid-table clubs. Elite sides win over 40% of away fixtures, while the league average sits closer to 25%. The ability to win away from home reflects squad depth, tactical flexibility, and the mental resilience to perform under hostile conditions — qualities that separate genuinely title-contending clubs from those who merely accumulate points at home. A high away win rate is perhaps the clearest sign of a truly dominant team.

Summary & Conclusions

1. Points per match and win rate are the most reliable indicators of final league position, clubs consistently above 2.0 PPM and 55% win rate almost always secure a top-four finish, while those below these thresholds rarely escape the lower half of the table.
2. Defensive efficiency proves more decisive than attacking output alone, teams conceding fewer than 0.8 goals per match outperform higher-scoring sides with leaky defences, suggesting that a solid defensive structure is the foundation of any successful season.
3. A combined view of goals scored and goals conceded per match reveals which clubs are genuinely well-rounded versus those relying on a single strength.
4. Away win rate is the clearest differentiator between elite and mid-table clubs the ability to win consistently on the road reflects squad depth and tactical flexibility that home form alone cannot demonstrate.

Taken together, these 6 KPIs move beyond the basic league table to provide a multi-dimensional view of team performance, giving clubs, analysts, and scouts a richer foundation for decision-making around recruitment and tactics.
